DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Cathrine Kinslow on July 21, 2006.

The application has been amended as follows:

In claim 1, second paragraph, after "data processing system", insert the phrase "in a single architecture".

In claim 8, second paragraph, after "data processing system", insert the phrase "in a single architecture".

In claim 26, second paragraph, after "data processing system", insert the phrase "in a single architecture".

In claim 33, second paragraph, after "data processing system", insert the phrase "in a single architecture".

In claim 42, last paragraph, after "data processing system", insert the phrase "in a single architecture".

In claim 43, last paragraph, after "data processing system", insert the phrase "in a single architecture".

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance: The prior arts of record teach a key store manager manages user key data and handles requests for key operations from system applications. Users connect to the system through terminals or remote computers that may be equipped with smart card readers, see US Patent 5,778,072 to Samar and US Patent 6,393,565 to Lockhart et al. The prior arts of record, however, fail to teach singly or in combination, responsive to a request to perform a cryptographic operation, dynamically selecting between one of a software process and a hardware process within the data processing system in a single architecture for performing the cryptographic operation based on a policy to form a selected process and performing the cryptographic operation using the selected process wherein the cryptographic operation is an encryption of data using a key; wherein the key is a software key and the selected process is the hardware process and the step of converting the key comprises converting the software key into a hardware form useable by the hardware process for performing the cryptographic operation as recited in independent claims 1, 26, and 43; wherein the key is a hardware key and the selected process is the software process and converting the hardware key into a software form useable by the software process for performing the cryptographic operation as recited in independent claims 8, 33, and 42. Consequently claims 1, 8, 26, 33, 42-43 are allowable over the prior arts of record. Claims 2-4, 9-10, 12-14, 19, 27-29, 34-35, and 37-39 are directly or indirectly dependent upon claims 1, 8, 26, 33, 42-43 and therefore are also allowable over the prior arts of record.
